

URN notation requirements ranking

 categoryName: URN notation

 Value: Descending order

QualityIndicators	Value▼
User-defined links between GRL and UCM elements	125
Reference to "parent" component in UCM plug-ins	121
Meta-information (tagged values) attached to URN elements	115
UCM exception mechanism (definitions and handling)	114
Distinguishing UCM plug-in maps that are the same instance from those that are different instances	110
UCM events on start points, waiting places, and timers	103
Visual user-defined comments (post notes) for UCM diagrams	103
Time concept in URN	101
UCM component classes and instances	101
Aspect-oriented concepts and notation for UCM	100
Performance annotations	100
GRL dependencies between actors - expanding/hiding actor details	99
Groups of stubs which share the same plug-in instance and optional merging of plug-in bindings for those stubs	98
Aspect-oriented concepts and notation for GRL	96
UCM component stacks	94
UCM stub references (separate from stub definition)	93
UML class diagrams for describing domain models	92
UCM component parameterization in stubs/plug-ins	90
UCM dynamic components (slots) and dynamic responsibilities	85
UCM empty responsibilities	80
