

URN notation requirements ranking (Free)

 categoryName: URN notation

 Value: Descending order

QualityIndicators	Value▼
Distinguishing UCM plug-in maps that are the same instance from those that are different instances	70
GRL dependencies between actors - expanding/hiding actor details	68
User-defined links between GRL and UCM elements	68
Reference to "parent" component in UCM plug-ins	67
UCM component classes and instances	65
UCM exception mechanism (definitions and handling)	63
Meta-information (tagged values) attached to URN elements	62
Groups of stubs which share the same plug-in instance and optional merging of plug-in bindings for those stubs	61
Aspect-oriented concepts and notation for UCM	60
Aspect-oriented concepts and notation for GRL	57
UML class diagrams for describing domain models	57
UCM component parameterization in stubs/plug-ins	56
UCM events on start points, waiting places, and timers	56
Visual user-defined comments (post notes) for UCM diagrams	56
Time concept in URN	55
Performance annotations	47
UCM stub references (separate from stub definition)	46
UCM component stacks	45
UCM dynamic components (slots) and dynamic responsibilities	39
UCM empty responsibilities	35
