

URN notation requirements ranking (enforced)

 categoryName: URN notation

 Value: Descending order

QualityIndicators	Value▼
User-defined links between GRL and UCM elements	57
Reference to "parent" component in UCM plug-ins	54
Meta-information (tagged values) attached to URN elements	53
Performance annotations	53
UCM exception mechanism (definitions and handling)	51
UCM component stacks	49
UCM events on start points, waiting places, and timers	47
UCM stub references (separate from stub definition)	47
Visual user-defined comments (post notes) for UCM diagrams	47
Time concept in URN	46
UCM dynamic components (slots) and dynamic responsibilities	46
UCM empty responsibilities	45
Aspect-oriented concepts and notation for UCM	40
Distinguishing UCM plug-in maps that are the same instance from those that are different instances	40
Aspect-oriented concepts and notation for GRL	39
Groups of stubs which share the same plug-in instance and optional merging of plug-in bindings for those stubs	37
UCM component classes and instances	36
UML class diagrams for describing domain models	35
UCM component parameterization in stubs/plug-ins	34
GRL dependencies between actors - expanding/hiding actor details	31
