

Visualization feature requirements ranking (Enforced)

 categoryName: Visualization

 Value: Descending order

QualityIndicators	Value ▾
A hierarchical navigation view (where are we in the tree of maps/submaps)	67
Collapsing GRL actors and their content	59
Usable auto-layout of GRL diagrams	59
Collapsing UCM components and their content	57
Collapse/expand all in the Outline view	56
Closable panels/tabs for URN models with a large number of diagrams	54
Showing GRL conflict resolutions and other decisions in the Problems view	53
Viewing only the result of a UCM scenario traversal	53
Usable auto-layout of UCM diagrams	50
UCM scenario/map flattening (expand stubs)	46
A component tree view (showing the containment relationships in components)	42
Highlighting of start/end points and in/out-paths when moving from stub to plug-in map and back	42
Sorting of diagrams in the Outline view	41
The selectable visualization of GRL graphical and textual contribution/satisfaction labels globally	38
The use of resizable fonts for URN models	38
Adding labels (yellow triangle) to GRL elements when URN links are defined	35
Definition of root map for a feature/use case plus automatic listing of all plug-in maps reached from the defined root map	32
Centered labels in GRL intentional elements	31
Sorting of diagrams in the Strategies/Scenarios view	30
Collapse/expand all in the Strategies/Scenarios view	27
Changing group for a strategy/scenario	24
The automatic identification of top-level UCM maps	21
