

UCM scenarios and GRL strategies requirements ranking (Enforced)

 categoryName: UCM scenarios and GRL strategies

 Value: Descending order

QualityIndicators	Value
Coverage analysis of multiple scenarios	61
Displaying the result of the traversal of multiple scenarios	58
GRL numerical contributions (beyond current help, make, hurt ...)	57
GRL strategies integrated with UCM scenario definitions	55
Indicating order of plug-in traversal where one or more plug-ins of a stub are traversed multiple times during the execution of one scenario	50
Local variables for plug-ins in scenario definitions	50
Local variables for components in scenario definitions	47
Semantic variations for UCM traversal (AND-joins, timers, waiting places, ...)	44
Interactive selection (by user) of alternatives in non-deterministic locations when executing a UCM scenario	43
String data type for scenatio definitions	41
Automated combination and execution of each scenario in group A with each scenario in group B (or potentially, each scenario in the model with all other scenarios)	39
